FEATURED PROJECTS

Rogue-like Prototype

Unity | C# | Procedural Generation | Behavior Trees

A complete rogue-like prototype featuring procedural dungeon generation, item/loot systems, and permadeath mechanics. Data-driven design with ScriptableObjects for item definitions, and Behavior Trees for enemy AI with patrol, chase, and attack states.
Key systems: room-based procedural generation, item rarity tiers, enemy spawning with difficulty scaling, save/run statistics, and a custom debug console.

2D Platformer — Core Systems

Unity | C# | ScriptableObjects | Event-Driven

Core gameplay systems for a 2D platformer: character controller with coyote time and jump buffering, checkpoint system, collectibles, and power-ups. Event-driven architecture to decouple systems and enable designer-friendly tweaking.
Included custom editor tools: gizmos for checkpoint placement, visual curve editors for jump tuning.

Mobile Puzzle Game

Unity | C# | Mobile | IAP | Analytics

A match-3 puzzle game for iOS/Android featuring 100+ levels, power-ups, and daily challenges. Implemented in-app purchases, rewarded ads, and analytics tracking.
Optimized for low-end devices with object pooling and sprite atlasing.
